FOCUS on Tuflok

The Tuflok Blue Nylon patch when applied is permanently fused onto the screw thread of the parent component, and increases the prevailing removal torque, allowing the screw to be locked in any position upon assembly.

Tuflok 180 is a blue nylon patch permanently fused to the screw thread. This process provides excellent vibration resistance and torque performance for all applications requiring controlled loading and re-usability.

Tuflok is effective, whether or not the fastener is fully seated, making it ideal for applications where continual adjustment is required.

Industry Approvals

Our Tuflok product is approved to a wide range of industry standards including:- DIN 267 part 28, BS 7715:1994, IFI#524, General Motors, Ford WA970, Rover RES.22.FP.02, Jaguar JFS.02.01.04. Plus many other industry approvals.

Product Guide

We currently process a range of Headed Components, Studs, Plugs and similar size parts.

We can apply our coating to ferrous or non-ferrous materials (Steel, Aluminium, Stainless Steel or Brass).

We offer a complete Plate and Patch service.

This is a general guide to the products we currently process. We are able to process other components subject to evaluation.

Kenny D'Arcy

Prelok Sales Engineer Kenny D'Arcy is available for free consultation on your Thread Locking & Sealing requirements. With several years experience within the industry Kenny will recommend the most cost effective locking or sealing solution to suit your specific application. With the support of our in-house engineering team we are able to offer samples or pre-production parts for evaluation and customer approval.
